

Environmental Management Policy

British American Tobacco Samsun factory acknowledges its obligation to effectively manage the environmental aspects and impacts related to its products and services as an integral part of its business performance and culture.

BAT is committed to sustainable development by operating beneficially for current and future generations, mitigating the environmental impacts of its activities, and continuously improving its environmental performance through the following commitments:

- BAT researches, evaluates, and implements best practices in line with its global ESG agendas.
- BAT establishes achievable targets, identifies projects, and develops purpose and goal programs within its global and local operations.
- BAT assesses its environmental impacts, identifies significant effects, monitors them, defines operational control conditions, complies with legal requirements, and minimizes them.
- BAT complies with national regulations, BAT ESG agenda requirements, and other obligations and organizes its operations accordingly.
- BAT provides adequate resources, qualified personnel, and funding to reduce its environmental impacts within the scope of the environmental program of the BAT ESG agenda.
- BAT implements natural resource use and energy reduction programs and develops projects within the scope of the BAT ESG agenda.
- BAT ensures that the defined standard requirements are completed and understood and defines roles and responsibilities for implementing these requirements.
- All employees are responsible for environmental protection, reduction of natural resource consumption, effective water management, and the sustainability of water resources within the framework of the BAT ESG agenda and implemented standards.
- BAT regularly reviews policies, standard requirements, and regulatory requirements to manage and ensure effective implementation of changes in variable conditions, legislation, and standard requirements, as well as new investments and changing conditions.
- BAT ensures pollution prevention at the source and efficient and effective use of natural resources.
- BAT continuously trains its employees on its standards, ESG agenda, standard requirements, and regulatory requirements.
- BAT identifies potential emergencies, prepares emergency plans, and conducts emergency preparedness exercises.
- BAT ensures that the company's environmental policy is shared with relevant stakeholders and understood by its employees.
- BAT implements communication strategies for all employees and provides external communication.
- BAT engages in activities for good water management, ensures the sustainability of water resources, monitors water quality, collaborates with stakeholders sharing the same watershed for water reduction and conservation efforts, and provides necessary water hygiene for its employees.
